Speaker will present in person in Rammelkamp R219

Population Health Research Institute (PHRI) Seminar Series

Friday, October 30, 2026
9:00 – 10:00 am

The Power, Peril and Pervasiveness of Artificial Intelligence

Thomas E. Love, Ph.D.

Director, Biostatistics and Data Science Division
Population Health Research Institute, The MetroHealth System
Professor of Medicine, Population and Quantitative Health Sciences
Case Western Reserve University School of Medicine

Artificial intelligence is rapidly transforming how we access health information, make medical decisions, and conduct research. While AI offers tremendous potential to advance health research and expand our analytical capabilities, it also raises important ethical, societal, and scientific concerns. This presentation explores the opportunities, risks, and limitations of AI in health research—and why thoughtful adoption matters as the technology continues to evolve.

With more than 30 years at Case Western Reserve University and 25 years at MetroHealth, Dr. Thomas Love has made significant contributions to biostatistics, data science, and health policy. A Fellow of the American Statistical Association and dedicated educator, his work connects data with real-world patient health
